STAR AND MESH TOPOLOGY

AIM

To Implement a inter VLAN structure that has 2 VLANs VLAN 10 & VLAN 20. VLAN 10 should contain mesh topology and VLAN 20 should contain ring topology.

DESCRIPTION

Inter-VLAN Structure Project: This network configuration implements a central router to enable communication between two distinct virtual local area networks. **VLAN 10** is configured with a high-redundancy **mesh topology**, while **VLAN 20** is organized in a resilient **ring topology**. The layout optimizes data routing across separate broadcast domains.
